Amputee Rehabilitation Program

Outcome Report July 2013 - June 2014

Bryn Mawr Rehab Hospital was the first facility in the United States to earn accreditation by the Commission on Accreditation for Rehabilitation Facilities (CARF) for our Amputee Rehabilitation Program. Our patient-centered program focuses on physical, cognitive and behavioral skills and helps our patients achieve the highest level of independence possible.

We provide a continuum of care including acute inpatient care, outpatient services, community re-entry and return to work goals, as well as support groups for current and former patients and their family members.

Our patients receive a minimum of three hours of combined physical and occupational therapy at least five out of seven days. Additional services, such as higher intensity physical and occupational therapy, speech pathology, psychology, cognitive retraining, recreational therapy and other services are provided based on our assessment of each patient's individual needs.

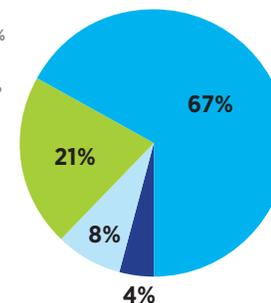

For more information about this report or our Amputee Rehabilitation Program, please call 484.596.5566.

STATISTICS

Discharges	86 patients
Average Age	63 years old
Average LOS	12 days
% of patients evaluated within 1 day of referral to BMRH:	84%

To refer patients to the Bryn Mawr Rehab Hospital Amputee Rehabilitation Program, have your care manager at the acute care hospital call us at 484.596.5566.

Bryn Mawr Rehab Hospital, a member of Main Line Health, is a leader in the field of physical medicine and rehabilitation. The 148-bed, non-profit hospital, offers a continuum of rehabilitation services, including acute inpatient care, as well as outpatient services for adults and adolescents. The range of illnesses and injuries treated at BMRH includes traumatic, mild traumatic and non-traumatic brain injury, stroke and other neurological disorders, spinal cord injury, amputee and orthopedic injuries and illnesses. In addition, Main Line Health Outpatient Rehab Network provides rehabilitation services at convenient locations in Philadelphia's western suburbs for patients of all ages.

Our specialized services include Aquatic Therapy, Driver Rehab, Horticultural Therapy, Work Hardening, Assistive Technology, Post-concussive treatment and Vestibular (balance) Therapy.

Each year we treat nearly 3,000 inpatients and more than 100,000 outpatient visits, making us one of the largest providers of physical medicine and rehabilitation services in the region.

Results

Functional Outcomes

On average, at the time of admission, patients who require an amputation of the lower extremity require minimal assistance to complete activities of daily living, including getting dressed, walking and getting in and out of bed. They are able to complete more than one-half of the tasks themselves and require assistance to complete the remaining tasks.

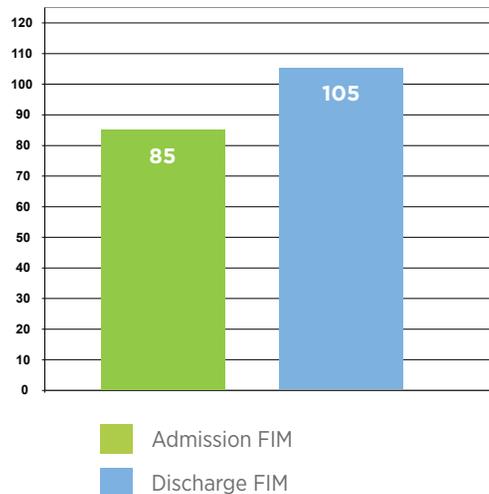

On average upon discharge, our patients require only supervision to complete the tasks involved in daily life. This means our patients can complete most of the physical work, but they need someone with them to make sure they are safe and able to complete the tasks.

Result

96% of our patients met their goals at discharge.

Functional Improvement

Amputee Rehabilitation Program

Result

Patients achieve overall functional improvement in our program.

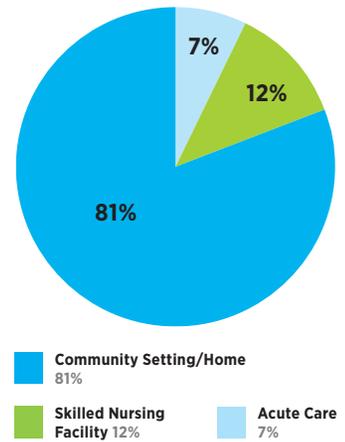

Levels of FIM scoring

- 126 - Independent
- 108-125 - Modified independent
- 90-107 - Supervision
- 72-89 - Minimal assistance
- 54-71 - Moderate assistance
- 36-53 - Maximal assistance
- under 36 - Dependent

Discharge

Most patients who receive intensive, inpatient therapy as part of our comprehensive Amputee Rehabilitation Program at Bryn Mawr Rehab Hospital are admitted from an acute care hospital where they stayed following their amputation. Other patients are admitted from home or skilled nursing facilities when they are ready to begin training with a newly obtained artificial limb. On average, patients are ready for prosthetic training three months after their initial surgery. Prior to their amputation, most individuals were living at home, some worked and some were retired.

Following discharge from Bryn Mawr Rehab Hospital, 81% of our patients were able to return home; 12% required ongoing care at a skilled nursing facility; and 7% were re-admitted to an acute care hospital due to complications.

Patient Satisfaction

The primary focus of our Amputee Rehabilitation Program is to provide the highest quality, personalized clinical patient care. There are many factors that contribute to success, including our outstanding clinical care team of physicians, nurses and therapists, as well as a calming, healing environment.
