</table>
Main Line Health System (MLH) has conducted a Community Health Needs Assessment (CHNA) at each of its hospitals with the purpose to better understand and respond to the health care needs of its communities. This CHNA, finalized in March 2013 is specific to Riddle Hospital (RH), and builds upon a previous System-wide Main Line Health CHNA which was completed and published in 2009.

**The Process**

The CHNA was compiled by analyzing population and demographic data and comparing health indicators such as health status, health conditions, and incidence and mortality rates to local, regional and national rates. Additional comparisons were made to understand influences on health, such as the use of preventive health services, access to care, mental health, children’s health and factors influencing the health of older adults. Some select economic, educational and behavioral influences were also reviewed. The data presented in the report were obtained from both public and proprietary sources. Input was also sought to represent broad interests of the community and obtained via a series of community surveys.

The RH report contains information and commentary specific to RH as well as comparative information from two other suburban MLH System acute care hospitals: Bryn Mawr Hospital (BMH) and Paoli Hospital (PH). MLH also conducted a CHNA for its other system hospitals: Lankenau Medical Center (LMC) and Bryn Mawr Rehabilitation (BMRH). However, these reports are separate due to the characteristics of the communities they serve.
Community Health Needs

This CHNA contains information on numerous health indicators in various sections of the report including: population and demographics, community-based data and community survey results. This information was utilized to understand the health status and identify the health needs of the community. Subsequently, the following criteria was considered to select community health need priorities.

- The health indicator is at lower performance than the regional, state and national benchmark, or the Healthy People 2020 target (HP2020)
- The health indicator reflects a national focus for improvement
- There are community stakeholder interests in the health indicator
- A special population was identified that warrants additional services

Additionally, a number of data observations were developed from which the following priorities were identified. The priorities are of equal importance.

- Senior Care
- Cardiovascular / Stroke
- Arthritis
- Cancer
- Cultural / Diversity

Supporting data for the selection of the health priorities follows. This information is also contained throughout the CHNA document.
### Senior Care

- Older adults are the fastest increasing age segment in the RH area, making up 15.3% of the 2012 population which is greater than the Southeast PA (SEPA) percent of 13.5%. One in seven older adults has fallen in the RH area, which can cause injury or hospitalization. Older adults also account for 70% of RH’s admissions. There is a national focus on the older adult population emphasizing the importance to promote healthy outcomes through a variety of programs such as disease and injury prevention education, promotion of self management, socialization, caregiver support and collaboration among hospitals, older adults, government, community and advocacy resources.\(^1\)

### Cardiovascular Health / Stroke

- Heart disease rates (prevalence) are higher in the RH area than in SEPA for: arrhythmia, congestive heart failure, hypertension and ischemic heart disease. More than one in four adults have high blood pressure and/or high cholesterol. In the U.S. heart disease is the leading cause of death and stroke is the third leading cause of death. Controlling risk factors, such as high blood pressure and high cholesterol for cardiovascular disease, is critical to impacting the health of the community.\(^1\)

---

Cancer
• Incidence rates for breast, colorectal, lung and prostate cancer is higher in the RH area than in SEPA. The percentage of adults who smoke is 15%, above the HP2020 target of 12% and smoking is a risk factor for lung cancer. Reducing risk factors, early detection and providing a continuum of care from evidence-based screening to appropriate follow up, can increase survival rates and reduce the burden of cancer in the U.S.¹

Arthritis
• Arthritis is the most common chronic condition among adults in the RH area affecting approximately one in four adults. Arthritis rates are higher in the RH area than those in SEPA. Arthritis, a chronic condition, affects the quality of life and commonly occurs with other chronic conditions such as diabetes, heart disease and obesity.¹ The goal of treatment is to reduce pain, improve function and prevent further joint damage.

Cultural / Diversity
• There are pockets of diverse populations in the RH community. Although there is limited information on these sub-populations, they may contain persons with varying health needs. This has prompted RH, as part of the MLH System, to also make cultural/diversity a priority.

Riddle Hospital (RH) will address these priorities with action plans to positively influence the health and well-being of the RH community.

Age distribution

The largest age segment in the population is 18 to 44, followed by 45 to 64.

The Riddle CHNA area has a higher percentage of its population age 65 and over (15.3%) than does SEPA (13.5%).

Source: Truven Health.
The 65+ age segment shows the largest percentage growth. This represents the continued aging of the baby boomer generation.

While the increase of the 0-17 age cohort is small, its growth is in part from babies being born to the large 18-44 age segment.

The religious make-up of the Riddle CHNA area is primarily comprised of Catholic and Christian populations.

*Includes Protestant, Presbyterian/Baptist/Other Christian Denominations

Residents (4.7%) of the Riddle CHNA area are less likely to have been born in a foreign country compared to residents in the region (9.2%) and the country (12.7%).

*Q: “In what country were you born?”
Higher education levels, as seen in the Riddle CHNA area (52.4%), are associated with jobs that provide health insurance.

Numerous public health studies link educational attainment with health and well-being. Those who have a higher level of both education and income have the best health outcomes, including decreased mortality-morbidity and longer life spans.

Home ownership

The Riddle CHNA area has a higher rate of homeownership than that of the state (71.0%) or country (66.6%).

The rate of homeownership was climbing slightly through 2010 in the Riddle CHNA area while regional and national rates are dropping.

Observations – community characteristics

**Geography** -- The Riddle Community Health Needs Assessment (CHNA) area touches upon a wide range of communities. The CHNA area reaches from Swarthmore in the east to Chadds Ford in the west, and from Marcus Hook in the south to Newtown Square in the north. The zip codes included in the assessment area are those zip codes where Riddle Hospital provides health care services to 10% or more of the population; twelve (12) USPS defined geographic zip codes meet the criteria for inclusion. These twelve zip codes account for 66.6% of the total discharges at Riddle Hospital.

**Community Characteristics** -- The area has a high percentage of college-educated adults and most zip codes have a high household median income. A high level of homeownership also indicates a high degree of stability in the area. As in any area, there are pockets of the population (see median income map) that are not as affluent as the area in total.

**Aging** -- The Riddle CHNA area has a substantial older (age 65+) population (15.3%) which is projected to be the fastest growing of the age segments.

**Pediatrics** -- The age 0-17 population is expected have small growth, and currently accounts for 23.2% of Riddle’s CHNA area population.

**Sub-Populations** -- The population is predominately white. The statistics do not show a high percentage of any one sub-population in the area. The largest racial sub-population is black at 7.5%.
Community Analysis

Health Status and Chronic Conditions
Health status

Adults self-reported health status – fair or poor

Adults are less likely to report fair or poor health in the Riddle CHNA area (11.4%) compared to SEPA (16.2%). The “My Healthcare Voice” online panel covering a comparable area reported a similar 12% of adults have “fair” or “poor” health.

Self-reported health status correlates with socio-economic indicators, such as poverty. Respondents from the 2010 PHMC Household Health Survey are nearly three times more likely to report fair or poor health if living under the 200% FPL (31.1%) compared to respondents over the 200% mark (11.1%). Fair or poor health is also correlated with chronic conditions. For instance, 44.0% of adults with a chronic condition are in fair/poor health vs. 11.5% without a chronic condition (2008 survey – SEPA area).

Sources: PHMC Southeastern Pennsylvania Household Health Survey, 2010; “My Healthcare Voice” online panel, November 2011.
Chronic condition – adults by age group

About one in three older adults are coping with a chronic condition, more than the other age group.

Riddle CHNA area residents are more likely to report having a chronic condition in both age groups compared to SEPA.

Types of chronic conditions – all adults

Arthritis is the most common chronic condition among adults in the Riddle CHNA area.

The Riddle CHNA area rates for asthma and arthritis are higher than the SEPA rates while diabetes and heart condition rates are lower.

*Q1: “Have you ever been told by a doctor or other health professional that you have or had: a. Asthma; b. Heart disease, including angina, congestive heart failure, a heart attack or other heart problems; c. Diabetes?”  Q2: “Do you have arthritis, such as osteoarthritis, rheumatoid arthritis, gout, fibromyalgia, or lupus?”  Note: The heart disease survey question is not comparable to BRFSS because BRFSS includes stroke.

**Diabetes by age**

**Percentage of adults diagnosed with diabetes by age**

</table>

The heart disease prevalence rates are higher in the Riddle CHNA area than SEPA.

*Prevalence is the number of persons with a specified condition in the population at any one time.

Note: CHNA area rates are calculated on county age/sex rate applied to the age/sex zip code populations in the CHNA area. These rates may not reflect variations in local cases.

Source: Thomson Reuters.
Screening for heart disease – risk factors

Residents in the Riddle CHNA area exceed the regional testing percentage as well as the Healthy People 2020 goal.

Heart disease – risk factors

The Riddle CHNA area has a lower percentage of adults with high blood pressure than SEPA. However, there is a higher percentage of adults that have high cholesterol than SEPA.

The Riddle CHNA area is above (28.8%) the Healthy People target (26.9%) for high blood pressure and above (29.4%) the target for high cholesterol (13.5%).

Sources: PHMC Southeastern Pennsylvania Household Health Survey, 2010 High BP and 2008 for High Cholesterol.

Overall, the mortality rates are lower in the Riddle CHNA area than the rest of the region. However, Riddle’s rates are higher for stroke, breast cancer and pneumonia compared to the regional rate.

Source: PHMC Community Health Data Base - Pennsylvania Department of Health official death records 2003-2006. Details about age adjustment methodology are available for review.
Observations – chronic conditions

Health Status -- The Riddle CHNA area is overall a healthy population; only 11.4% of the adults report their health to be fair or poor. The health of the population is reflective of the good socio-demographic characteristics of this population.

Chronic Conditions -- About one in three older adults have a chronic condition in the Riddle CHNA area.

Robert Wood Johnson Foundation, “County Health Rankings & Roadmaps” website ranks Delaware County as the 37th healthiest county in PA. The Riddle CHNA area represents a healthier population segment within the county.

Arthritis -- It is the most common of the chronic conditions for adults.

Diabetes -- The percentage of adults diagnosed with diabetes in the Riddle area is slightly lower than SEPA. The CDC has reported that the number of Americans diagnosed with diabetes has tripled since 1980. This increase has been linked to obesity, inactivity and old age. However, between 1997 and 2006, deaths rates for people with diabetes dropped substantially.

Heart Disease -- Riddle CHNA residents and their health care providers are doing an excellent job in screening for clinical risk factors, namely high blood pressure. The prevalence of heart disease is higher than the SEPA population; over one in four adults have high blood pressure and/or high cholesterol. The Riddle CHNA area population is above the Healthy People 2020 targets for measures. Heart disease is the leading cause of death in the Riddle CHNA area.

Stroke -- Stroke is another primary cause of mortality. The age adjusted mortality rate is higher than for SEPA.

Cancer -- Cancer is a leading cause of mortality in the Riddle area as it is in the country. Prostate and breast cancer have the highest incidence rates of cancer in the Riddle area; there are higher incidence rates for breast, colorectal, lung and prostate cancer than in the SEPA population. Public health efforts regarding cancer focus on prevention and detection of the disease by addressing risk factors such as smoking cessation, diet and exercise. These issues are covered in detail in the next section.
Community Analysis

Preventive Health
Cervical cancer screening

The majority of women 21 to 65 years of age have received a PAP test within the last two years. PAP screening rates are similar between the Riddle CHNA area and SEPA.

Note: According to the American Cancer Society (ACS) guidelines, PAP tests should not begin until age 21 and will vary by age and previous diagnosis.

According to the American Cancer Society (ACS) guidelines, CBE should occur about every three years for women in their 20s and 30s and every year for those over the age of 40. The ACS continues to recommend that yearly mammograms begin for women at age 40.

*Screenings within last two years.

*Screenings within last two years.

Men who received prostate exam within the past two years (age 50+)

The prostate cancer screening rate has generally been flat in the Riddle CHNA area and has remained higher than SEPA since 2004. The rates differ from area to area and over time among the MLH suburban hospitals.

Note: The prostate exam is a PSA and/or digital rectal exam. The American Cancer Society (ACS) recommends that beginning at age 50, men should discuss with their doctor the pros and cons of testing for prostate cancer; for black men, the discussion should occur at age 45 if there is a family history before age 65. Sources: PHMC Southeastern Pennsylvania Household Health Survey, 2002, 2004, 2006, 2008, 2010.
Cancer screenings: colon

Adults who have received a colonoscopy or sigmoidoscopy* (age 50+)

The trend of adults receiving a colon cancer screening is increasing in the Riddle CHNA area.

*Q: “About how long has it been since you last had a colonoscopy or a sigmoidoscopy? These tests are performed to screen for colorectal cancer.”

Recommended screening intervals vary by test but should begin for men and women at age 50.

Cancer screenings: colon

Adults who have received a colonoscopy or sigmoidoscopy (Age 50+)

The majority of those who have been screened in the Riddle CHNA area were screened in the past five years.

Recommended screening intervals vary.

Colon cancer screenings by age

Adults who have never received a colonoscopy or sigmoidoscopy (Age 50+)

Within the age group of 50-59, approximately 32% have never had a colon cancer screening. This compares less favorably to BMH and PH but is better than the percentage for SEPA.

Adult obesity

Percent of adults who are obese

Healthy People 2020: 30.5%
PA BRFSS 2010: 29%

The percent of obese adults in the Riddle CHNA area is below the Healthy People target (30.5%). However, obesity has been increasing and is now at 26%, nearly reaching the SEPA and the PA BRFSS percentages.

Obesity is a risk factor for poor health and chronic conditions such as heart disease, diabetes and stroke.

“Obese” individuals are determined by the Basal Metabolic Index (BMI) calculation of height and weight.
Adults who are obese by age

Adults ages 18 to 64 are more likely to be obese compared to those over age 64 in the Riddle CHNA area. The percentage of older adults who are obese is below SEPA as well as the comparable suburban areas.

The CDC has reported that obesity in older adults is related to the increase in diabetes in this age group.

Exercise

Adults who exercise or are physically active on a regular basis

The majority of adults report being “physically active” on a regular basis. Only 9% of adults report being inactive in the Riddle CHNA area. The exercise profile is similar to that of all adults in SEPA.

Even with an active population, obesity is increasing.

Note: Physically active represents exercising 3-7 days per week.

The barriers to exercise vary by age – older adults are more likely to report that “health problems” prevent them from getting exercise, whereas younger adults say they don’t have the time or they are too busy.

Some of the “other” barriers include a perception that exercise is too expensive, that the individual is already in good health and doesn’t need to exercise, that there is no place in the neighborhood to walk, run or bike and no child care.

*Source: PHMC Southeastern Pennsylvania Household Health Survey, 2008. The data reflect the entire MLH service area, not RH specifically.*
When compared to the state-wide average, adults in the Riddle CHNA area are behind in daily consumption of fruits and vegetables. In Pennsylvania, 25% of adults indicated in 2007 they were eating fruits and vegetables five or more times a day (BRFSS). However, adults in the Riddle area eat more fruits and vegetables on a daily basis than adults in SEPA.

Children’s consumption of fruits and vegetables is similar to adults’. Only 15.8% of children in the Riddle area ate five or more servings a day. (State comparison not available for children.)

Nutrition, exercise, chronic condition & obesity

Percentage of adults by BMI group in SEPA compared to nutrition, exercise and chronic condition

Adults in SEPA who are considered to have a normal weight tend to eat more fruits and vegetables, exercise more and be less likely to have a chronic condition than those who are overweight or obese.

Sources: PHMC Southeastern Pennsylvania Household Health Survey, 2010; 2008 for chronic condition and obesity comparison.
Percent of adults who smoke (every day or some days)

Smoking among adults has generally been flat in the Riddle CHNA area since 2006. Fewer adults smoke in the area (15%), compared to SEPA (20%) and the state (18%). However, the percentage of adults who smoke remains above the Healthy People goal (12%).

Smokers who are advised to quit by their doctor and smokers who attempt to quit

Over half of the smokers in the Riddle CHNA area have tried to quit. The percentage of smokers in the Riddle CHNA area who tried to quit is slightly less than in SEPA. An additional 25% of smokers should try to quit to meet the Healthy People 2020 target.

Sources: PHMC Southeastern Pennsylvania Household Health Survey, 2010 Tried to quit, 2008 for doctor recommended.
Smokers have most commonly tried to quit on their own in both the Riddle CHNA area and the region. However, Riddle’s area tends to be more likely to try alternative methods compared to other suburban areas and the region.

Note: Some of the “other” methods used include Internet counseling, “Quit net,” self help books, a combination of methods, and other unspecified.

About one in seven adults in the Riddle CHNA area report restless sleep which is less than reported for SEPA.

Poor quality sleep is increasingly connected to a host of serious health problems. Some studies have connected poor sleep to cancer, heart disease and obesity as well as to other hazards such as occupational and automobile accidents.

Observations – preventive health

**Cancer Screenings (Goals)** -- Recent decisions by various medical bodies have created a wide variation in “best practices” for the timing of cancer screenings.

Among the major cancer screenings studied, mammography and colonoscopy are the two tests that are most underused, although colon cancer screening has been increasing each survey period. The data show that the 50 to 59 age group is least likely to have been tested for colon cancer. Cancer screening rates in the Riddle CHNA area tend to be in line with other suburban areas and SEPA.

**Obesity** -- Adult obesity continues to increase in the Riddle CHNA area. This increase is despite a population that tends to be more active than the SEPA and PA populations.

**Smoking** -- The percentage of adults who smoke has generally been flat over the last several years in the Riddle area and SEPA. However, the percentage of adults smoking in the Riddle CHNA area (15%) remains above the Healthy People 2020 target (12%). There is a continuing need to encourage and support smokers in their cessation efforts.

**Sleep** -- About one in seven adults reported sleep problems in the Riddle area. Lack of sleep may manifest itself with health care issues or unintentional injuries.
Community Analysis

Access to Care
Regular source of care

Over 90% of adults in the Riddle CHNA area have a regular source of care. Adults in suburban communities in SEPA generally have a higher percentage of a “regular source of care” than the Healthy People 2020 target. This may reflect the supply of primary care services in the SEPA suburbs.

*Q: Is there one person or place you usually go to when you are sick or want advice about your health?*

Insurance status

Insurance coverage estimates (all ages) – 2011

Eighty-eight percent of residents in the Riddle CHNA area are covered by private insurance or Medicare. Five percent of residents in the area lack insurance coverage.

Data from the Community Economic Survey indicates that residents in the area are paying more for insurance coverage as well as higher co-pays.

Sources: Truven Health; “My Healthcare Voice” online panel, March 2012.
The Riddle CHNA area has a relatively small proportion of households living at the federal poverty level (FPL) compared to SEPA. A larger proportion live in households earning just twice the FPL, however, the total percentage remains low. The low FPL reflects the general affluence of the households in the area.

In 2010, a family of four earning $22,050 would be living at the FPL.

No prescription coverage

Adults who lack insurance coverage for prescriptions

Fewer adults in the Riddle CHNA area lack coverage compared to SEPA and other suburban areas.

Older adults are more likely to lack coverage than younger adults.
No dental coverage

Older adults are more likely to lack coverage for dental care in the Riddle CHNA area than older adults in SEPA.

An Institute of Medicine report indicates lack of oral health can lead to increase risk of respiratory and heart disease as well as inappropriate use of emergency departments for dental care.

Sources: PHMC Southeastern Pennsylvania Household Health Survey, 2008; Advancing Oral Health in America, Institute of Medicine, April 2011.
Changes in insurance coverage - 2012

Adults in the MLH service area who report that their health insurance coverage changed during the past year

More than two-thirds of the respondents reported some kind of change to their health insurance benefits.

Source: “My Healthcare Voice” consumer panel, March 2012.
Insurance changes - 2012

Reasons for change in health care coverage in the MLH area

- Higher Premium
- Increased Co-pay
- Change in Rx Coverage
- Change in Plan Type
- Became Medicare Eligible
- Other

The main reason for loss of coverage is unemployment, but respondents also lost health insurance benefits due to employer discontinuation or a change in jobs.

Source: “My Healthcare Voice” consumer panel, March 2012.
There has been a general improvement from 2011 of residents reporting delaying or avoiding health care because of cost, however, care is still being avoided. Census data supports these findings.

Q. “In the past 12 months, have you or a member of your household avoided or delayed receiving any of the following health care services because of cost?”
Concern about seeking care – time off work

Adults who would be concerned about seeking health care for a medical condition that would require short- or long-term disability leave in today’s economic climate

Six out of seven adults are somewhat or very concerned about taking time off from work to receive medical care.

Source: “My Healthcare Voice” consumer panel, March 2012.
Observations – access to care

**Routine source of care** -- Ninety-one percent of adults in the Riddle CHNA area have a regular source of health care.

**Health Care Affordability** -- There are relatively few people in the Riddle CHNA area who have no health insurance or who are at or below the federal poverty level (FPL). The socio-demographic analysis of the CHNA area indicated that there may be pockets within the area where there are persons in need of subsidized health care.

Survey data indicate that more persons with health insurance continue to see changes in their policies, usually higher premium and co-pay costs. Approximately 82% of surveyed consumers indicated they are very or somewhat concerned about scheduling time away from work to receive health care. This concern may indicate the need for non-traditional office hours from health care providers.

Consumers in the area are also indicating they are delaying or avoiding health care services because of cost. Although the Philadelphia western suburbs remain more affluent than SEPA, consumers are still delaying or avoiding care because of costs.

The CDC reports that unemployed adults have poorer health and access to health care.

Birth rates in the Riddle CHNA area trail behind the other suburban geographies and SEPA. Teen pregnancy rates, as well as low birth-weight babies, are relatively low when compared to SEPA.

The rates shown above are per thousand (unless otherwise noted) based on an average of four consecutive years (2003-2006).
Source: Data provided by PHMC and based on information collected from official records from the Pennsylvania Department of Health.
No health insurance – children

Similar to their parents, children in the Riddle CHNA area are likely to be insured.

Although adults may be more susceptible to losing their health insurance due to current economic conditions, children will not because of the PA Children’s Health Insurance Program (CHIP). CHIP covers the full spectrum of care from routine, preventive care, including dental and eye exams, to diagnostic imaging tests, mental health services and emergency care and inpatient stays.

Almost all children (99%) in the Riddle CHNA area receive care in a physician’s office.
Over 90% of children in the area have received a dental exam within the past year.

The percentage of children receiving eye exams is lower because not all children will be required to get an annual exam. Children above the age of four are generally recommended to get an eye exam every two years unless a problem is suspected by parents or detected during routine screenings. Forty-three percent of children have received an eye exam in the Riddle area within the past year.
Asthma

The percentage of children who have asthma in the Riddle CHNA area is higher than the regional rate and the comparable suburban areas. Asthma is identified as a health care concern for school age children in the Riddle area.

Asthma – trips to emergency department

Percentage of children with asthma who had to visit the emergency department for treatment in the past year (age 0-17)

The Riddle CHNA area has a lower proportion of asthmatic children receiving care in a hospital emergency department than in SEPA.

Nutritional goal

Servings of fruits and vegetables eaten on a daily basis

Children’s consumption of fruit and vegetables is similar to adults’. Only 15.8% of children in the Riddle area ate five or more servings a day (16.9% for adults). The percentage for those that have four or more servings per day is similar to SEPA.

While the childhood obesity rate of 30.4% in the Riddle CHNA area falls below the SEPA rate, childhood obesity remains a problem. School nurses in the Riddle area rank obesity as a top health concern.

The ideal target for physical activity among children is one hour every day. About 27% of children in the Riddle CHNA area are “physically active” four or fewer times per week. This percentage is better than SEPA but slightly higher than comparable suburban areas.

Question asked about children three years of age or older.
Observations – children’s health

**Birth Rate** -- The birth rate for the women in the Riddle CHNA area is lower than comparable suburban areas and SEPA.

**Maternity and Neonatal Care** -- The birth-related indicators in this report for the Riddle CHNA area show that mothers, in general, have better birth outcomes than in the larger region.

**Healthy Weight** -- While childhood obesity had been declining, about 30% of children were still considered obese in 2010 in the Riddle CHNA area. School nurses rate this as one of their top concerns.

**Asthma** -- Asthma is the most common chronic condition among children. It can also be serious, requiring ongoing medication administration – a stated concern of school nurses surveyed, and can result in trips to the emergency department.

**Physical Activity** -- Physical activity is important for maintaining good health. Physical activity burns calories and creates muscle mass, which both help in maintaining body weight. The Riddle CHNA area is fortunate that a higher percentage of children are active compared to SEPA.
Community Analysis

Older Adults
Aging in place

Older adults (65+) who plan on staying in their current homes for 10+ years – and those who report difficulty affording housing costs

In a recent study, a majority of older adults reported that remaining in their own homes as long as possible is important to them. The same is true in the Riddle CHNA area. However, about 33% of older adults are concerned they can't afford to remain in their homes due to living costs.

This preference, combined with the graying of the baby boomer generation, represents a potential increase in the demand for home care services.

*Represents the sum of very difficult and somewhat difficult.
Awareness and use of programs – Riddle

Older adults (65+) in the Riddle area who have used and are aware of various social service programs available

*Did not ask if activity programs at senior centers were needed.

**PACE: Prescription Drug Program for the Elderly.

Awareness and use of programs – SEPA

Older adults (65+) in SEPA who have used and are aware of various social service programs available

*Did not ask if activity programs at senior centers were needed.

**PACE: Prescription Drug Program for the Elderly.

Transportation

Older adults (65+) who had to cancel a doctor’s appointment due to a transportation problem

Transportation does not appear to be a major barrier to receiving health care services in the Riddle CHNA area.

About 12% of older adults in the Riddle CHNA area report taking advantage of senior transportation services. Public transportation services may or may not be helpful to frail elderly in successfully reaching a destination.

Caregivers

The percentage of all adults (18 years of age or older) caring for an adult 60 or older with a long-term disability or illness was steadily increasing until a recent dip in 2010 in the Riddle area, falling below the regional rate.

Use of formal in-home care

Percentage of older adults (65+) who use formal care and how services were paid

<table>
<thead>

<td>20.2</td>
<td>19.8</td>
<td>8.5</td>
</tr>
</tbody>
</table>

In the Riddle CHNA area, 7.7% of older adults use formal in-home care, similar to the percentage in SEPA.

Payment for care is spread across Medicare, private insurance and out-of-pocket. Private insurance coverage may relate to the number of older adults living in continuing care retirement communities (CCRCs).

Note: “Formal” care is defined as having someone provide services in your home, such as medical injections, changing bandages, help with grooming, cooking or shopping. The person could be someone from an agency or someone you hired. Source: PHMC Southeastern Pennsylvania Household Health Survey, 2010.
Falls can be a barrier to independent living. About one in seven older adults in the Riddle CHNA area has fallen in the past year.

Falls can lead to visits to the emergency room or a hospital stay. As such, falls may be a cause for additional monitoring.
The employment rate reveals the other types of lifestyle demands that may weigh on older adults. Working can be the result of being an active adult or may be out of necessity.

About 15% of older adults in the Riddle CHNA area are employed as of 2010. Data is unavailable specific to the CHNA area as to whether current economic conditions are impacting older adults who may need employment for household expenses.

</tbody>
</table>

A Continuing Care Retirement Community (CCRC) is a residential community for adults that offers an independent living unit (an apartment or cottage) and access to a continuum of long-term care services (assisted living or nursing home care) that meet the residents' health and social needs as they change over time. These services are provided via a contract between the resident and the “Community.”

Observations – older adults

Older adults -- Older adults are the fastest increasing age segment in the Riddle CHNA area.

Aging in Place -- In the Riddle CHNA area, 63% of older adults responded that they would prefer to stay in their current homes. Cost is an issue for a third of older adults who would like to remain in their current homes in both the Riddle area and SEPA.

Caregiving -- As the population ages, formal and informal caregiving will continue to be an important issue. Until 2010, there was a steady increase in the number of adults who report that they provide care for an older adult. As the health care needs of these older adults increase, they may transition to the need for formal homecare services, assisted living, or skilled nursing home care. There may be a need for respite care, as caretakers need a break from their care-taking duties. Support for caregivers was identified as an issue by the Main Line Health physician medical staff.

Falls -- Falls by older adults should be a concern that is worth monitoring. Roughly one in seven older adults in the Riddle CHNA area has fallen in the past year. Falls can result in increasing visits to emergency rooms or an inpatient hospital stay.

Nursing Homes & CCRCs -- There are five nursing homes and seven continuing care retirement communities (CCRCs) in the Riddle CHNA area. Coordination of care with these facilities is important to maintain an individual’s health and prevent hospital re-admissions.
Community Analysis

Mental Health
Diagnosed mental health conditions

About 13% of the adults in the Riddle CHNA area report having been diagnosed with a mental health condition.

Receiving treatment for mental health conditions

Adults with a diagnosis receiving treatment for their condition

When asked, “Are you currently taking medication or receiving any other type of treatment for your clinical depression or other mental health condition?” 57% of adults in the area said “yes.”

Mental health

Data from the 2010 Pennsylvania Behavioral Risk Factor Surveillance System (BRFSS) survey indicate that adults in the suburban SEPA counties are significantly less likely to have emotional support and life satisfaction issues than adults in Pennsylvania.

Mental health: high stress

Note: High stress is defined as a rating of 8, 9, or 10 on a 10-point scale, where “10” indicates an extreme stress level during the past year.

Stress -- According to the Journal of the American Medical Association (JAMA), stress hormones have damaging effects if the heart is exposed to elevated levels of them for an extended period of time. Stress can cause increased oxygen demand on the body, spasms of the coronary (heart) blood vessels, and electrical instability in the heart’s conduction system, among other ill effects. Stress is a mental and behavioral lifestyle component that contributes to disease in the population.

High stress rates spiked in 2010 to over 28% in the Riddle CHNA area, surpassing SEPA (26%) according to the Southeastern Pennsylvania Household Health Survey. Respondents to the “My Healthcare Voice” online panel survey as well as the Main Line Health physician medical staff identified stress as having a major impact on the quality of health in the area.

Mental Health Conditions -- About 13% of adults in the Riddle CHNA area report having been diagnosed with depression or a mental health condition. Of those with a condition, 57% are taking a medication or another type of treatment to control the condition.

The Substance Abuse and Mental Health Administration reports* that 20% of adults in the U.S. experienced mental illness.

Input from the Community

Perception of Health Care Related Issues
In addition to data sources utilized in the community analysis section, RH and MLH sought input from persons located in the community such as community organizations, public safety officers (fire, ambulance and police), school nurses, public officials, MLH physicians and individuals residing in the community that participated in an on-line survey. The following summarizes the community’s perception of the top health care issues and the top issues impacting the quality of health. Issues identified via community input reinforces many of the data findings and observations in the preceding analysis.

The issues identified by the community as impacting the quality of health care are all noted elsewhere in the assessment. For instance, survey results from community leaders show their concern about health care affordability as well as the Community Economic Survey showing community residents are delaying health care decisions because of cost. Further, Main Line Health physicians identified stress and busy schedules as impacting the health of their patients and the community.

Source: My Healthcare Voice online panel survey, November 2011.

Health care affordability is the top response for how hospitals can improve the health of the community. Additionally, a previous Community Economic Survey revealed that persons are delaying health care treatment because of cost.

Residents of the area are also looking for hospitals to provide them with information to make informed health care decisions.

MLH physicians noted what they thought were the top issues impacting the health of the community. Their responses generally reflect the issues found throughout the assessment. However, persons reporting in the Community Survey did not directly mention their own compliance to medical regimens or healthy lifestyles as impacting their health.

COMPREHENSIVE REPORT
APPENDIX
Data sources utilized to compile the Community Health Needs Assessment

• Community-based public health data (Community Health Data Base) provided by Public Health Management Corp (PHMC) including data from the Southeastern Pennsylvania Household Health Survey (2002 to 2010)
  • One of largest, local health surveys in the country
  • Assesses health needs of local population
  • Provides “public health expertise”

• Truven Health (formerly Thomson-Reuters prior to June 2012)
  • Population data with projections
  • Insurance estimates

• Pennsylvania Department of Health

• Select national and state comparative data
  • CDC: Behavioral Risk Factor Surveillance System (BRFSS) 2010
  • CDC: Healthy People Targets 2020
Comparative benchmarks utilized in the Community Health Needs Assessment

United States: Healthy People 2020 is a joint initiative managed by the Centers for Disease Control and Prevention and the National Institutes of Health (NIH) that provides target measures. Public health goals, established by the Healthy People 2020 initiative, are provided where similar indicators are available.

Pennsylvania: Some benchmarks are provided to the state population per the 2010 Behavioral Risk Factor Surveillance System (BRFSS), which is a part of a national health monitoring initiative supported by the CDC.

Regional/Southeastern PA (SEPA): Where state and national indicators are not available, a regional benchmark is provided based on the five counties included in the PHMC Southeastern Pennsylvania Household Health Survey (Bucks, Chester, Delaware, Montgomery and Philadelphia). Another useful benchmark is the other MLH System hospitals, as health needs vary based on the characteristics of each Hospital’s community.
Data Availability and Data Gaps

Despite having access to numerous data resources, data specific to the mental health status and mental health needs of the population are significantly lacking for the zip code-based hospital CHNA areas. Available data reviewed included general statistics on adults diagnosed with depression or other mental health issues; adults receiving treatment (undefined) for mental health issues; and adults with stress. Mental health issues of prevention and treatment involve multi-dimensional societal and health issues that make determining need for services difficult to assess.

Sample sizes within the PHMC Community Health Data Base for certain racial/ethnic and religious sub-populations were too small to draw meaningful conclusions on certain indicators. Additional data sources and follow-up research are being used to further assess the health status of identified sub-populations.
Input utilized to compile the Community Health Needs Assessment

- Community Economic Survey
- Community Health Survey
- School Nurses Survey
- Elected and Appointed Officials Survey
- Community Leaders Survey
- Public Safety Officers - Ambulance, Fire and Police Survey
- MLH Health Care Provider Survey
Public Health Departments or Organizations

- Chester County Health Department
- Delaware County Intercommunity Health Coordination
- Montgomery County Health Department
- Montgomery County Aging and Adult Services

Organizations Serving Persons in Need

- ARCH (Area Residents Caring and Helping)
- Adult Care of Chester County
- Audubon YMCA
- Brandywine Valley YMCA, Jennersville Branch
- Bryn Mawr Partnership
- Bryn Mawr Presbyterian Church
- Cancer Support Community (formerly The Wellness Community of Phila)

CONTRIBUTORS WHO HAVE SPECIAL KNOWLEDGE OF OR EXPERTISE IN PUBLIC HEALTH

• Deborah A. Mantegna, RN, MSN: Mantegna is the Director Community Health Education for Riddle Hospital. Mantegna has held this position for 19 years, overseeing RH’s community outreach including educational programs, support groups and medical screenings. She supervises the medical alert program (Lifeline), the Tobacco Dependency Treatment program and the Childbirth Education program. She is active in the community and is a member of the Delaware County Immunization Committee, the Safe Kids Coalition and the Delaware County Networking Group. She co-chairs the Delaware County Tobacco Free Coalition and serves on the steering committee for Southeast Tobacco Free, a regional tobacco free coalition.

• Berwood Yost: Yost is Director of the Floyd Institute for Public Policy and also the Director of the Center for Opinion Research at Franklin and Marshall College where he also teaches courses in research methods and public health. He has substantial applied experience designing and implementing public opinion research using both qualitative and quantitative methods, and has conducted funded research on behalf of government, business, nonprofit organizations, public utilities, higher education and the media.
• Lynne Kotranski, Ph.D.: Kotranski is Managing Director for Research and Evaluation for the Public Health Management Corporation. She has over 25 years of experience conducting and managing diverse research, program evaluation and related technical assistance projects on the local, state and national level. The Research and Evaluation Group works with study design, quantitative and qualitative data collection and analysis, development of surveys and other instruments, conducting community and population needs assessments and working with individuals and organizations to address research and training needs. Kotranski and her staff provide assistance in identifying data needs, measure outcomes, and produce practical reports for program monitoring and planning.

• Francine Axler: Axler is Senior Research Associate for Public Health Management Corporation. She has been actively involved in the field of public health and health promotion, specifically in the collection and dissemination of health status, health behaviors, and utilization of health services data for residents of Southeastern Pennsylvania. Her focus is on teaching health providers how to utilize community level health data to develop needed, effective and targeted health promotion programs for vulnerable populations. She directs the PHMC Community Health Data Base, has a degree in sociology and a graduate degree in public health education.
There are a variety of local and county government agencies, community service organizations, non-profit public health organizations and advocacy groups that provide needed services to individuals and families in the community. RH has working relationships with many of these organizations and will continue to enhance its working relationship with these community resources to improve the health status of its community. Some of these resources include, but are not limited to:

- American Heart Association
- American Cancer Association
- Arthritis Foundation
- Delaware County Intercommunity Health Coordination
- Area YMCAs
- County Office of Service for Aging (COSA)
- Mirmont Treatment Center
- Catholic Social Services
- Operation Warm
- Delaware County Tobacco Free Coalition and Southeast Tobacco Free
- Safe Kids Coalition
- Delaware County Networking Group
- Linda Creed Breast Cancer Foundation
- Gary Papa Foundation
- Area Faith Based Organizations
MLH Hospitals serve populations in counties including, but not limited to: Chester, Delaware, Montgomery and Philadelphia. These hospitals provide services and additional resources for the community.

**Chester County**
- Brandywine Hospital
- Chester County Hospital
- Devereux Children's Health Center
- Jennersville Regional Hospital
- LifeCare Hospitals of Chester County
- Main Line Health - Paoli Hospital
- Main Line Health - Bryn Mawr Rehabilitation Hospital
- Phoenixville Hospital

**Delaware County**
- Crozer Chester Medical Center
- Delaware County Memorial Hospital
- Kindred Hospital - Delaware County
- Kindred Hospital - Havertown
- Mercy Fitzgerald Hospital
- Main Line Health - Riddle Hospital
- Springfield Hospital
- Taylor Hospital

**Montgomery County**
- Abington Memorial Hospital
- Brooke Glen Behavioral Hospital
- Eagleville Hospital
- Holy Redeemer Hospital and Medical Center
- Horsham Clinic
- Lansdale Hospital
- Main Line Health - Bryn Mawr Hospital
- Main Line Health - Lankenau Medical Center
- Mercy Suburban Hospital
- Montgomery County MH / MR Emergency Service
- Montgomery Hospital Medical Center
- Physicians Care Surgical Hospital
- Pottstown Memorial Medical Center
- Valley Forge Medical Center and Hospital
MLH Hospitals serve populations in counties including, but not limited to: Chester, Delaware, Montgomery and Philadelphia. These hospitals provide services and are additional resources for the community.

**Philadelphia County**
- Albert Einstein Medical Center
- Aria Health
- Belmont Center for Comprehensive Treatment
- Chestnut Hill Hospital
- CTCA-Eastern Regional Medical Center
- Fairmount Behavioral Health System
- Friends Hospital
- Good Shepherd Penn Partners Specialty Hospital
- Hahnemann University Hospital
- Hospital of Fox Chase Cancer Center
- Hospital of the University of Pennsylvania
- Jeanes Hospital
- Kensington Hospital
- Kindred Hospital - Philadelphia
- Kindred Hospital/South Philadelphia

**Philadelphia County (continued)**
- Kirkbride Center
- Magee Rehabilitation Hospital
- Mercy Philadelphia Hospital
- Methodist Hospital Moss Rehabilitation Hospital Nazareth Hospital
- Penn Presbyterian Medical Center
- Pennsylvania Hospital
- Roxborough Memorial Hospital
- Saint Joseph's Hospital - Philadelphia
- Shriners Hospital for Children - Philadelphia
- St. Christopher’s Hospital for Children
- Temple University Hospital
- The Children's Hospital of Philadelphia
- Thomas Jefferson University Hospital
The following health needs are important to the community. However, they are not being addressed with specific implementation plans, as services to address these areas are already being provided throughout the RH and MLH System communities.

**Obesity/Diabetes/Nutrition**
RH currently provides services to address obesity/diabetes/nutrition in the community. Currently RH promotes and participates in community events focused on nutrition and healthy living education. Obesity is a risk factor for cardiovascular disease, which is a health priority for RH. In this context RH will be addressing obesity/diabetes through various outpatient and wellness programs. Additionally, other MLH Hospitals have identified obesity as a priority and a MLH System-wide Work Group is being implemented to coordinate and share best practices across the health system for addressing this health need. RH will actively participate in the work group.

**Asthma**
Although asthma was a primary concern for school nurses, RH does not provide pediatric specialty services. Therefore, community pediatricians and MLH’s pediatric partner, Nemours Children’s Hospital are better suited to address this issue.
Behavioral Health
As noted, there are some data gaps to thoroughly understand the specific behavioral health issues in the community. Regardless, Main Line Health has several uniquely designated behavioral health centers, each specializing in a level of care and treatment. For families and individuals coping with issues like psychiatric disorders, addictions or other problems which affect one's sense of well-being and participation in life, the Main Line Health Behavioral Health network provides numerous services for the RH and MLH community. All MLH Hospitals can either care for or provide referrals for persons in need of Behavioral Health services.

Dental Health
The percent of the 65 plus population that lacks dental insurance coverage slightly exceeded the benchmark of SEPA. RH does not have the expertise to address this need. However, through various educational programs for the senior population (which is a priority area), RH will refer those persons in need to dental clinics when the need arises.
