

About the Bryn Mawr Hospital Patient Pavilion

Investing in the future

- The \$250 million investment in a new campus master plan positions Bryn Mawr Hospital for its future as a vital community resource that is committed to delivering superior health care effectively and efficiently.
 - This is the largest investment and most significant facility improvement in Bryn Mawr Hospital's more than 125 year history.
 - The campus master plan includes the new state-of-the-art, 256,418 sq. ft. eight-story Patient Pavilion. The project broke ground in May 2016.
 - The Pavilion includes all-new private patient rooms designed to meet the space and privacy needs of patients and families, while enhancing their comfort during inpatient stays and recovery from surgery.
-

A thoroughly modern space

- The new Patient Pavilion offers a new intensive care unit, two medical/surgical telemetry units, 12 fully-equipped, state-of-the-art operating rooms, a 25-bed maternity unit, labor and delivery unit, and neonatal intensive care unit.
- The new Patient Pavilion is a LEED (Leadership in Energy & Environmental Design) Silver Certification Building, a globally recognized symbol of excellence in green building.
- The building has two green roofs, with ground covering four to seven varieties of Sedum species.

A superior patient experience

- The new patient room design was based on feedback from hospital staff and patients.
 - A replica of a patient room in the pavilion was created off-stage to enable members of the Patient and Family Advisory Council, as well as clinical and non-clinical staff from across the hospital to experience the proposed layout and provide feedback.
 - As a result, several important adjustments were made to the design prior to any construction.
- From the colors and materials used in the space to the layout and large windows, Bryn Mawr Hospital's new patient rooms have been meticulously designed to create a more private, comfortable and safe patient experience.
 - Every patient room is single-occupancy with its own private bathroom. The average room size is 310-square-feet.
 - Room layout was designed specifically to maximize caregiver visibility of patient and patient visibility of natural light.
 - Rooms are organized into three distinct zones—caregiver, patient and family—for infection control practices and privacy.
 - Every room is telemetry-equipped for continuous heart monitoring if needed.
 - Comfortable/warm design to provide for a healing environment
 - Artwork hand selected to create a soothing experience
- Patients will also be able to experience an integrative approach to care from aromatherapy to therapeutic music, reiki, and pet therapy, to palliative and end-of-life care.
